Folding System

Pack-Smart Folding Systems produce sophisticated multi panel products for, direct mail, packaging and fulfillment markets. The folding systems are also often used in conjunction with scoring, slitting, inline perforating, affixing and gluing.

Folding modules are generally installed on vacuum transports or friction driven sheet conveying equipment. Pack-Smart modular folding technologies are capable of delivering unmatched results and awarding winning products for the paper converting industry.

When absolute high speeds are necessary, Pack-Smart offers the Dynamic Folding module which operates at high speeds and folds the product as it moves along the conveyor line without defecting the finished product.

Available Folding Solutions

- Pre-break module
- Front fold
- Electronic Back Fold
- Fold plate
- Static plough folds
- Inline belted fold modules
- Fold-bump-turn
- Dynamic Fold

Standard Features

- 2 KW Servo Drive
- Line position feedback
- Indexing Function
- Custom folding gripper
