High Speed CD/DVD Inserter

The high speed CD/DVD inserter module was designed and developed for one purpose, to automate the extremely slow and inefficient process of inserting CD's and DVD's into cases manually.

Feed by the famous Pack-Smart Rotary Feeder this system is capable of inserting an astonishing 80 discs per minute, or 4800 products per hour!

The high speed CD/DVD inserter module provides a unique advantage to the user, the attachment is extremely flexible in its ability to handle various types of CD and DVD packaging's. This allows the user to insert a wide variety of discs ranging from mini discs to full sized media discs.

The benefit to using Pack-Smart's high speed CD/DVD inserter module allows the user to feed various packaging cases with different hub types with no major down times.

The modules capability to adapt easily and efficiently to various hub types makes it a market first in the packaging industry.

System Standard Features

- High Torque brush less servo motor
- Planetary gear system
- "On-the-fly" placement position adjustment
- Electronic speed synchronization module
- Maintenance and production data menus
- Vacuum Release adjustment
- Vacuum cup angle adjustment
- Self contained dual vacuum system, 1 HP & 1/3 HP Vane Pumps
- Missing product input option (sensor optional)
- Low magazine input option (sensor optional)
- Pressurized blow off feature
- Dual suction cup system

Space Requirements on Host Machine

Across the Machine: 940mm

Running direction: 720mm
